

CUSTOM ERP / CONNECTED BUSINESS OPERATIONS

One workspace. Connected operations.

TERP Enterprise Resource Planning Platform

Tech Monkeys built a cloud-hosted ERP that brings procurement, lot inventory, sales, fulfilment, and financial operations into a shared operator workspace, with a dedicated mobile interface.

DELIVERY

Custom ERP

THE OPERATING REQUIREMENT

An inventory-led business needs to keep purchase orders, received quantities, stock availability, sales commitments, invoices, and payments aligned. TERP organizes these processes into linked workflows and gives owners a shared view of open work.

Procure

Purchase orders, intake, and vendor records

Sell

Pricing, sales orders, and pick queues

Manage money

Payments, payables, and customer balances

Decide and control

Reporting, roles, and closeout readiness

01 / PROCUREMENT THROUGH FULFILMENT

Follow stock from receipt to the customer order.

The ERP separates each operational stage while keeping quantities, statuses, and order information visible to the team.

01 Purchase orders and intake checks

Track draft, finalized, approved, partially received, and received purchase orders. Intake highlights quantity discrepancies and identifies when a discrepancy reason is required.

02 Lot-level inventory visibility

Review received and available quantities by batch, item, vendor, unit, and location. Stock states include posted, held, damaged, returned, in transit, and reversed.

03 Pricing and fulfilment handoffs

Build and price customer sales orders, track committed orders, and work through a pick queue with pick-list and pick-line steps. Versioned price books support global and customer-specific catalogs.

VERSIONED CATALOG CONTROLS

Price Books

Versioned, customer-facing catalogs generated from the pricing markup rules. Generate, publish, and reprice.

Name	Scope	
e.g. Summer Catalog	Global ▼	<button>Generate price book</button>

Live product view: price-book name, scope, and generation controls. No price book was generated during review.

Shared grids provide status filters, configurable columns, advanced filtering, and CSV exports across the reviewed operational modules.

02 / MONEY, REPORTING + GOVERNANCE

Make balances visible. Keep actions accountable.

Payment records, operational reports, and administrative controls support review across the business.

01 Payment and payable tracking

Review money in, money out, unapplied amounts, posted entries, and reversals. Payment records expose invoice-allocation traces; vendor bills move through open, approved, scheduled, partial, and paid states.

02 Owner-focused operational reports

Explore revenue, payables, client balances, inventory aging, category and vendor performance, cash movement, sales history, and closeout periods. Select time ranges and export CSV reports.

03 Roles, history, and closeout checks

Assign system or custom roles, with combined permissions for multi-role users. Review action history and archive-readiness checks that surface open work before period closeout.

Reports

Operator projections for owner decisions — live data.

Period All time ↓ ↓ Export CSV

Revenue Summary	Payables Due	Client Balances	Inventory Aging	Category Performance	Cash Movement	Vendor Performance	Client Sales History	Closeout Period
-----------------	--------------	-----------------	-----------------	----------------------	---------------	--------------------	----------------------	-----------------

Live product view: report categories, time-range selection, and CSV export controls. Financial figures and customer records are excluded.

The reviewed revenue report is an operational projection of orders. Formal adjustments are not yet tracked in that view.

03 / TECHNOLOGY + OPERATIONAL VALUE

Built for daily work, at the desk and on mobile.

The desktop operator console and mobile workspace expose connected business workflows through a cloud-hosted application.

CONFIRMED TECHNOLOGY FOUNDATION

Web interface	React + Next.js
Backend services	Node.js
Database	MySQL
Infrastructure component	Redis
Cloud hosting	DigitalOcean

OPERATIONAL VALUE

Connected work queues. Procurement, intake, inventory, sales, fulfilment, and money workflows share a central interface with status visibility.

Focused owner oversight. The dashboard surfaces receivables, payables, inventory value, aging stock, open work, and recent activity.

Mobile access to daily tasks. The dedicated mobile workspace includes inventory, catalog, payments, contacts, picking, and intake navigation.
